

INTEGRATION SUPPORT

SAP
Salesforce
SharePoint system
Suprema
CMITech -EF45 Iris readers
Johnson control P2000
BRAVO Id Card Printers
HID Omnikey.
Wacom signature pad.
Impinj UHF RFID readers.

FEATURES

- ◇ Fingerprint & access card-based identification and verification
- ◇ Multiple workflow approvals
- ◇ Detailed Audit logs (the whos, whats, whys & whose approval)
- ◇ Employee access provisioning
- ◇ Paper-pass designer module with 2D/3D/QR support
- ◇ Web-cam integration
- ◇ High Integration scalability
- ◇ Integrated basic T&A and Access Control modules
- ◇ Direct printing from third-party applications
- ◇ Printer pooling functionalities
- ◇ Real-time print monitoring
- ◇ Predefined & Customized reports

SECUPASS

PHYSICAL IDENTITY MANAGEMENT SYSTEM

PASS ISSUANCE DONE SECURELY

OVERVIEW

Secupass is a web-based pass issuance and physical identity management application providing a seamless and secure physical access provisioning; is feature rich and offers a broadened scope that overlaps with many adjacent security domains. It has a tight coupling with leading smartcard printing applications along with encoding features. Both card printing and access provisioning are achievable on a single click. This also provides workflow and approval process for controlled identity issuance.

Secupass can be integrated with a wide variety of third-party applications such as SAP, Salesforce, SharePoint, Active directory and HRMS systems for inbound data thus eliminating data duplication. Secupass comes readily integrated with Suprema readers, CMITech IRIS readers and an optional module to communicate with P2000 Johnson access control systems.

The application is fine-tuned to perform the operations in an efficient way ensuring high quality security standards which are compatible with the OWASP standards.

WHY IS SECUPASS IMPORTANT TO YOUR ORGANIZATION?

Businesses leaders and IT departments are under increased regulatory and organizational pressure to protect and optimize access provisioning process of corporate resources. As a result, they can no longer rely on manual and error-prone processes to assign and track user access. Secupass automates these tasks and enables granular controls coupled with auditing actions and workflow approvals for the ID card issuance, biometric enrollment and other related processes.

Secupass, which has an ever-increasing list of features -- including biometrics and ID card enrollment, verification and identification, is well suited to the rigors of the new security landscape.

On a fundamental level, Secupass encompasses the following components:

- How individual's access life cycle is identified in a system and how they are assigned to individuals whilst aligning it with KPIs of the card/access issuance departments.
- Avoiding fraudulent activities in access provisioning by providing workflow, approvals and audit logs.
- Assigning access to individuals or groups of individuals and protecting sensitive data within the system while securing the system itself.

SECUPASS CAN CATER TO THE REQUIREMENTS OF:

Aviation

Hospital

Banking and financial

Education

Oil and gas

Government

Event management

Corporates
